Do you know what the usual price range for concrete products and equipment is in the market at the moment? Linqip's platform lets you submit a request to many **Support and Foundation Suppliers and Companies** and get free quotes from each one.

## Basics of Concrete Market

---

Concrete has been used by civilizations since around 6500 B.C. While concrete and cement are often used interchangeably, they describe different products. As part of concrete, cement is combined with water, binds the aggregates into place. Construction projects ranging from infrastructure to smaller projects like foundations can be built using concrete, a common building material. As a composite material, concrete is composed of fine and coarse aggregates and a fluid cement paste, which hardens over time.

Most concrete in the United States is manufactured by companies headquartered abroad, usually with branches and plants in the country. Concrete mixes can be provided as pre-mixes (also referred to as ready mix or ready mixed concrete) or as basic ingredients that are mixed by the buyer company. Concrete companies in the United States, however, provide products made of concrete, such as bollards, bricks, concrete pipes, structural products, and concrete installation services.

In the forecast period between 2021 and 2028, the market size is expected to increase by 8.42% in the forecast period between 2021 and 2028, from USD 427169.37 million to USD 752141.84 million.
